### Response:

The screenshot for 7.1 - 7.6 is under Lesson 8

Because under lesson 7 was a textbox instead of image upload

Because after lesson 7 was a textbox instead of image upload.  
I tried creating a new submission/assignment, but it still was a textbox.

## Response:

Most of the stuff in PHP was similar to JavaScript. Mainly the syntax was different like calling/declaring variables with \$varName was a new concept to me. Another difference were the for loops in which you state it in reverse order. In Python it's like "for each x in y" but in PHP it was "for y each x" However, the rest I had basic understanding of as it was pretty much like any language like Python or JS just the syntax/names was different like calling dictionaries as associative arrays. I'll just have to study the methods and functions as there were a lot. While they have similar functionalities the names of the functions were different like count() is .length in JS. The rest makes sense.
